

# Outdoor learning—ANIMAL HOMES

Dosbarth Ysgawen—Feb 2023

We have been thinking about homes and dens for garden animals.

We discussed what animals needed for a good den. It must be safe, warm and waterproof.

We worked together to design and build dens using only natural materials.

We had to work with others collaboratively. We listened carefully to each others ideas, and made changes when our ideas did not work as well.

We used mud as glue to stick grass to our dens.

Once we had completed our animal dens, we looked at our friends' builds. We guessed which animals lived there and made positive comments about their designs and builds.

Finally, we read the feedback our friends had left us and thought about how we would improve our designs, using ideas we had seen in other group's builds.
